DOME FUSE INSTALLATION DURING PDS

Models:

'06 Prius

P D087-05

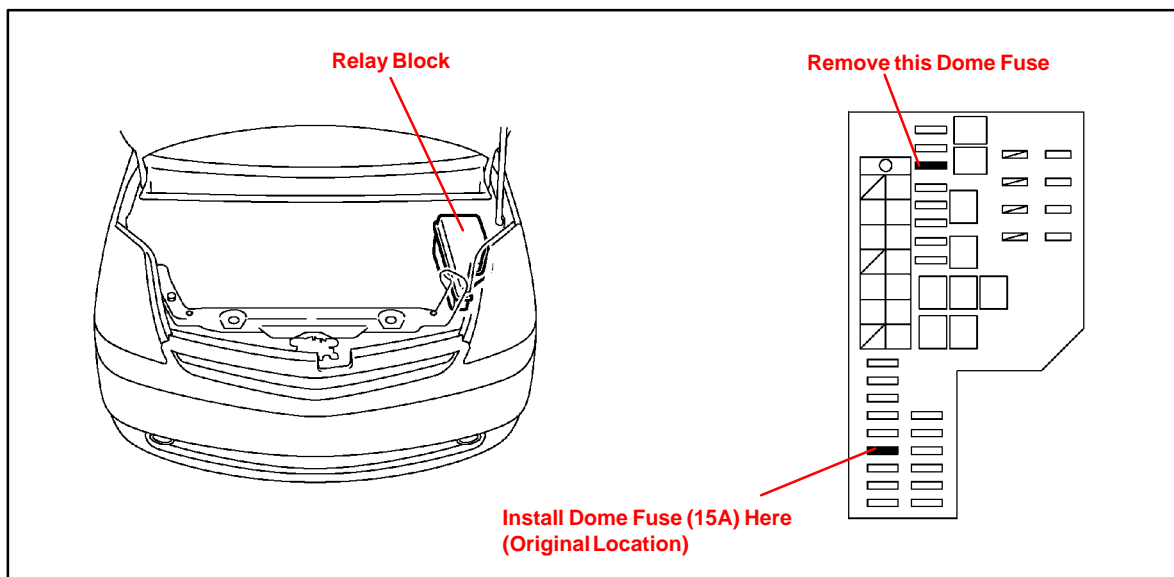

PRE-DELIVERY SERVICE

Introduction The DOME fuse has been removed on the Prius at the assembly plant to reduce parasitic current draw in transit and storage. Reinstall the DOME fuse during Pre-Delivery Service (PDS).

Applicable Vehicles

- **2006** model year **Prius** vehicles.

Installation Procedure The DOME fuse (15A) is stored in the blank space of the Relay Block in the engine compartment. The DOME fuse must be reinstalled to the original location during Pre-Delivery Service (PDS) at the dealership as shown below.

NOTE:

If the vehicle is stored in the dealership for a long period of time after PDS, disconnect the negative (–) battery terminal to prevent battery discharge. Refer to TSB No. PG007-03, “Maintenance for HV and Auxiliary Batteries,” for additional information.
